About the Authors

Pavel Kostovitch is a developer, trainer, and author specializing in Microsoft technologies and tools. He is a Microsoft MVP and a Funlight author, and loves all things software. Pavel has been around since the days of 8-bit machines and still looks back fondly on his programming days on his Commodore 64.

Alex Ionescu is Vice President of EDR Strategy at CrowdStrike and an internationally recognized expert in low-level system software, operating system research and kernel development, security training, and reverse engineering. He teaches Windows Internals courses around the world and is active in the security research community through conference talks and bug bounty programs.

Mark Russinovich is Chief Technology Officer for Microsoft Azure, Microsoft's global enterprise-grade cloud platform. Mark is a widely recognized expert in distributed systems and operating systems. He co-founded Winternals Software and joined Microsoft in 2006 when it was acquired. He is the primary author of the Systeminternals tools and website, which include dozens of popular Windows administration and diagnostic utilities.

David Solomon (retired) taught Windows kernel internals for 20 years to developers and IT professionals worldwide, including at Microsoft. His first book was *Windows NT for OpenVMS Professionals*. He then authored *Inside Windows NT*, 2nd edition, and later, with Mark Russinovich, co-authored the 3rd, 4th, 5th, and 6th editions of the *Windows Internals* series. David has spoken at many Microsoft conferences and was a recipient of the 1993 and 2005 Microsoft Support Most Valuable Professional (MVP) award.
